Enabling Developers To Find & Use Your Services

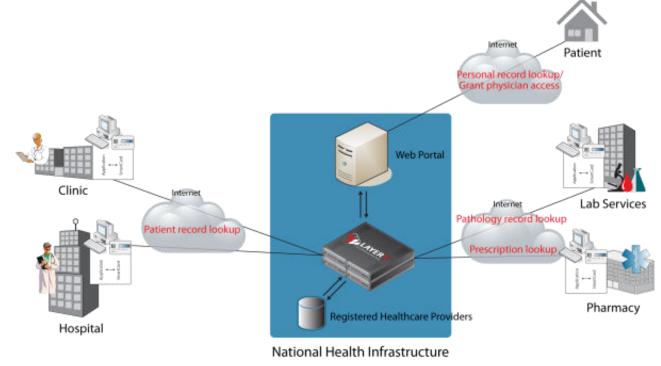

© 2014 CA. All rights reserved.

Decentralized National Healthcare

- Problem: the government needed to reduce healthcare admin & overhead costs
- Solution: decentralized solution that securely pulls patient information from healthcare providers nationwide, and assembles them to create a complete patient record on demand

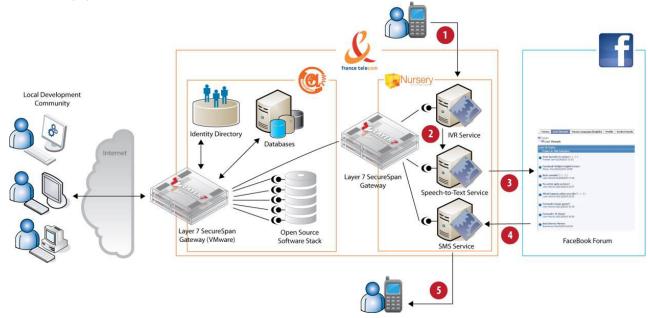

Results:

- Reduce costs
- Improve quality of healthcare
- Protect patient record privacy

Telco: Publishing Telecom APIs

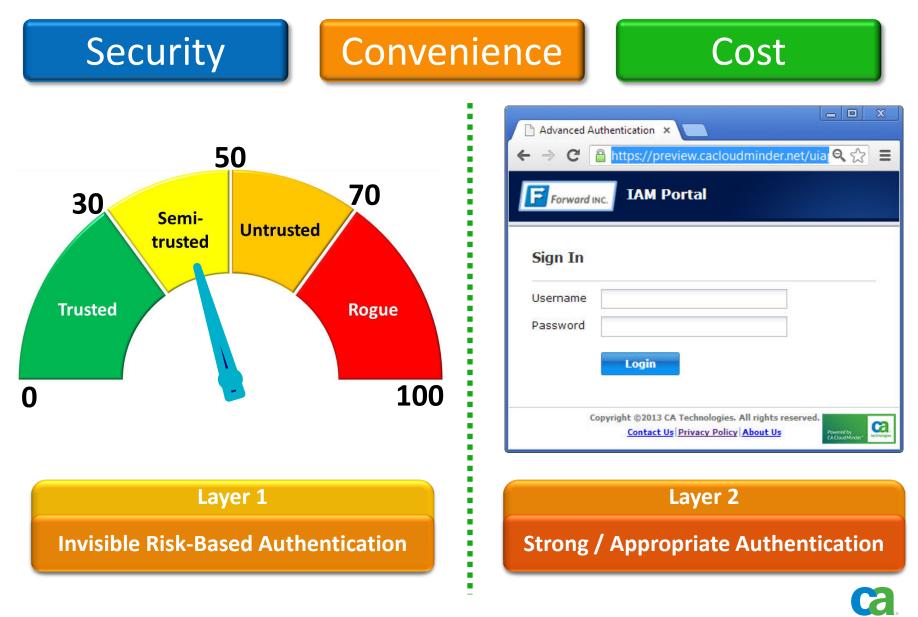

- Problem: publicly exposing Telecom APIs presents some unique challenges around how they get packaged, secured and managed for easy consumption
- Solution: policy-based controls allowed defining the identity and security for their APIs; track usage; monitor interface health; and update APIs without breaking client applications

 Results: an agile IT platform on which to develop new offerings faster and at less cost by reusing/recomposing existing services

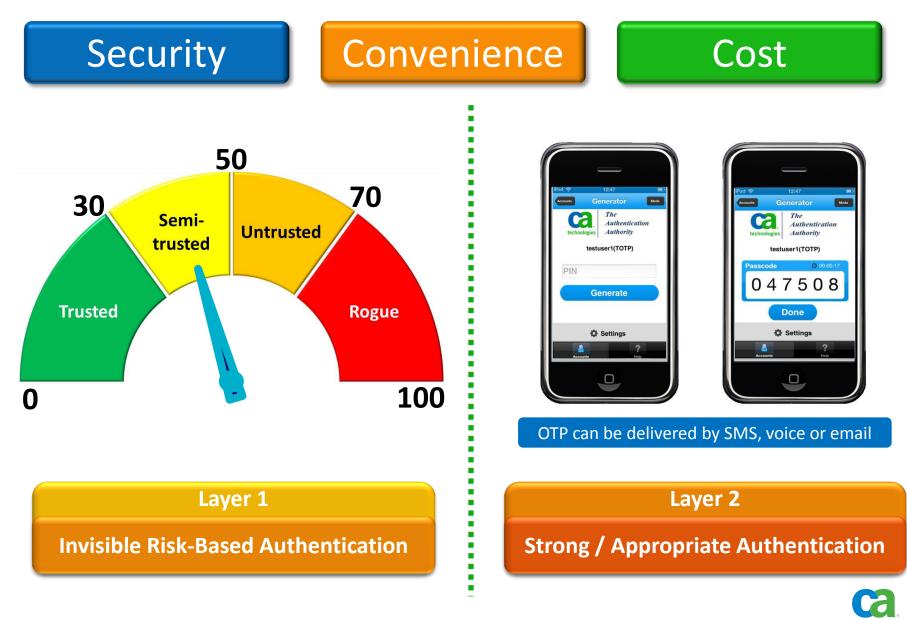

Advanced authentication & fraud detection

Are all soft tokens secure?

CA Advanced Authentication endorsements

Dr. Martin E.Hellman Professor Emeritus Stanford University Inventor of PKI

"Since the invention of public key cryptography 25 years ago, people have been struggling to secure the private key without the assistance of hardware

Arcot's innovative Cryptographic Camouflage* has solved this problem. Finally there is a cost-effective and convenient means to strongly authenticate users and transactions over the internet without the need for cumbersome hardware." * patent 7,170,058

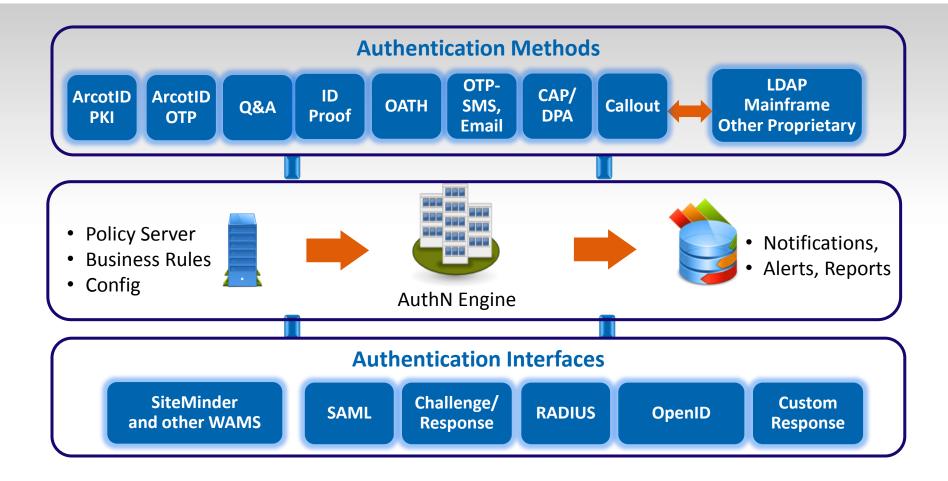

Dr. Taher Elgamal PhD – Stanford Inventor of SSL while at Netscape

"Perhaps one of the weakest links in accessing important internet assets is a strong tie between the user and the areas they have the right to access. The use of a simple **user namepassword mechanism is truly a weak link**.

What is **unique about Arcot's approach** is that it is **both strong and people friendly..**"

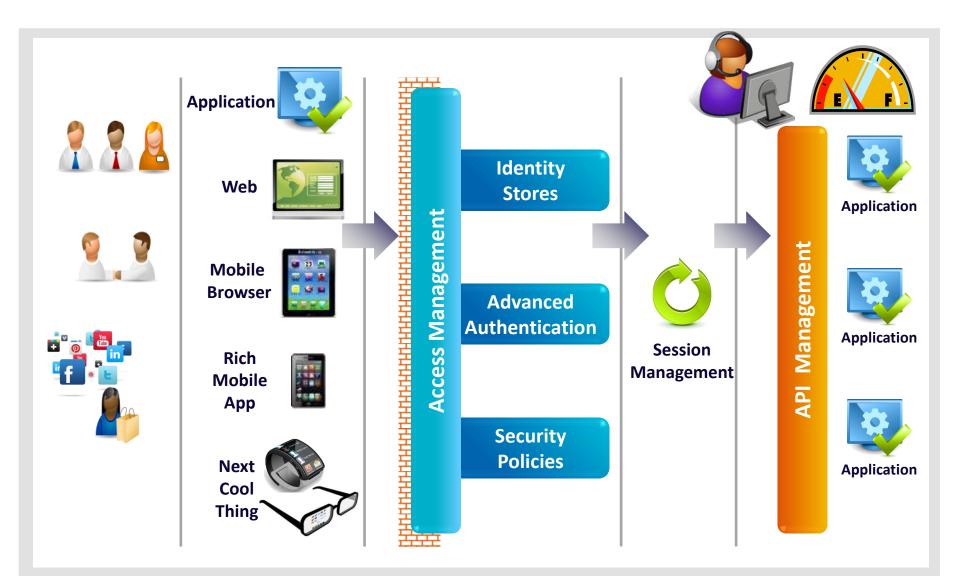

CA AuthMinder – Flexibility

Optimized Customer Experience – A key Differentiator
